Profile Summary

Backend Developer with experience in designing and implementing backend systems using Monolithic and Hybrid Architectures. Familiar with building MPA + SSR and SPA + SSR applications, focusing on scalability, performance, and user-centric solutions. Strong understanding of HTML, JavaScript, and Tailwind CSS, along with solid knowledge of SQL and NoSQL databases. Proficient in problem-solving and delivering efficient solutions for complex challenges. Continuously learning and improving technical skills, with experience in CI/CD pipelines, security best practices, and performance optimization to develop scalable web applications.

Work Experience

Web Developer

Gh Light

Tehran, Iran

March 1403 - May 1403

Tasks and Achievements

- Over a two-month period, I worked on the development of a website, including backend, frontend, SEO, and database sections. I gained experience in various areas, including system optimization and related development.

Skills

- Python
- Unit Testing: pytest, postman
- Django
- Django Rest Framework DRF
- RESTful
- Flask
- FastApi
- Django orm
- ci/cd: Docker Env git
- Celery
- Caching: Memcached Redis Filebased
- Sql: Oracle SQLite MySQL SqlServer PostgreSQL
- NoSql: MongoDB
- JavaScript
- React
- Html & css
- Tailwind
- C++
- C
- Qt
- Bash
- Linux
- Microsoft Windows Server

IT Expert

Arya heavy machinery

Tehran, Iran

November 2023 - February 2024

Tasks and Achievements

- I worked as an IT Specialist for a four-month period, handling various IT-related tasks for the organization. During this time, I acquired skills such as NETWORK+, CCNA, network monitoring, and worked with various IT tools. I managed HP servers, installed, configured, and administered vCenter, managed firewall and internet equipment, installed and maintained Cisco devices, provided support for network-based software like the SAP system of Hamkaran System, resolved hardware and software issues, addressed both passive and active network problems, and oversaw network management and control.

trainee

qt framework

Tehran, Iran

September 2022 - December 2022

Tasks and Achievements

- During a three-month period as a Qt Developer, I enhanced my skills in C++ and C, particularly in object-oriented programming (OOP) in C++ and memory management. I also learned to work with Qt and design using this framework.

Education

Diploma in mathematic

Institute/School: allameh tabatai kargar

Tehran, Iran

2019 - 2022

GPA: 18.7

Bachelor of computer engineer

Branch: software

Institute/University: university of north tehran

Tehran, Iran

1401 - Present

GPA: 18

- Ccna R&S
- Netwrok+
- Vcp-icm
- Microsoft Active Directory
- DHCP

Projects

Gh Light:

For: gh light

June 2024

This website was designed and developed for the store, which offers a variety of products for sale. The site includes various systems such as inventory management, a shopping cart, product pages, and a customer support section. I was responsible for designing, database development, creating the user interface and user experience (UI/UX), and setting up email systems and communication services. The project was implemented using the Django framework and utilizes advanced systems for order and customer management.

Frontend: HTML, CSS, JavaScript, Bootstrap

Backend: Django, DRF (Django REST Framework), RESTful API, ORM, PostgreSQL, Pytest

To DO List:

For: personal

June 2024

The To-Do List application is a task management tool built using Django. The app features a backend with APIs powered by Django REST Framework and Django's Object-Relational Mapping (ORM), along with a simple and user-friendly interface built with HTML, CSS, and JavaScript. Users can manage their tasks, authenticate, reset passwords, and easily access Frequently Asked Questions (FAQ).

Project_page

For: personal

December 2024

This is my personal website, which consists of two main pages. The first page provides an overview of my skills and expertise in software development, along with details about me and my work experience. The second page showcases my projects in detail. Each project includes descriptions, images, and videos demonstrating their functionality, with links to the source code available for visitors to explore further.

Built with: HTML, Tailwind CSS, JavaScript, GithubPage
